## Academic Project

Financial Statement Analysis and Company Valuation

- Conducted a comprehensive financial analysis of Lockheed Martin using financial ratios (liquidity, profitability) and growth metrics evaluation (EPS, ROE), P&L analysis across Income Statement, Balance Sheet and Cash flow statement
- Evaluated company performance and investment attractiveness through ratio analysis and historical trend assessment to present actionable investment insights and recommendations based on financial performance of the company over the years
- Analyzed Amazon Inc across key business segment and derived implied growth rate of 9.84% and issued recommendation based on 25% upside from previous price rate of \$239.89

Investment Portfolio Analysis

- Constructed Conservative, Moderate, and Aggressive investment portfolios and evaluated across eleven equities and fixed income securities using historical return data and achieved 4.45%, 8.72% and 28% portfolio projection respectively
- Applied Sharpe Ratio, Beta, and CAGR metrics to evaluate portfolio performance and their risk and returns and provided recommendations aligned with investor risk profiles presenting KPI metrics and portfolio performance
- Tools: Advanced Excel (Power Pivot, Pivot Table, VLookup), Power BI (Dashboard and DAX)

Data Analysis and Data Visualization

- Designed and built interactive Power BI dashboards incorporating DAX, Power Pivot, Power Query and data visualization techniques for a large dataset for actionable business insight
- Analyzed business datasets to identify trends, relationships, and performance drivers and provided data driven recommendations.
- Transformed business data into actionable insights through KPI tracking and performance reporting and created visual reports to support business decision making
- Performed regression analysis, hypothesis testing, and chi-square evaluations using R and Excel to support data driven business decision making
